

PRESS RELEASE

September 18, 2007

EPIQ IS INVESTING IN ADDITIONAL CAPACITY

Tessenderlo (B) EPIQ is a company specialized in the production of electronic systems and subsystems. EPIQ currently owns production sites in France, Germany, Czech Republic, Bulgaria and Mexico.

Finalizing its third production site in Bulgaria

EPIQ Bulgaria has grown substantially over the last few years. To be able to accommodate the increased production, EPIQ decided at the end of 2006 to move forward to the construction of a third production site. This accommodation will be occupied in October and has a production capacity of one hundred million EUR on an annual basis. The investment has a price tag of about five million EUR.

Start of finishing second building in Czech Republic

The capacity of EPIQ Czech Republic is currently fully used. To create the necessary space to receive projects here as well, we will convert a second building, which was used as a warehouse since 2001, to a production site. The finishing involves an investment of one million EUR and creates forty million EUR additional production capacity for EPIQ Czech Republic.
